

# Sodium Valproate

Mood stabilizer/anti-epileptic

## Your medication

# Sodium Valproate

## What is this leaflet for?

This leaflet is to help you understand more about your medicine.

Your medicine could look different to the pictures on this leaflet.

Valproate is also called Sodium Valproate, Epilim, and Depakote.

Valproate could come as tablets, capsules, or as a liquid

## What is Valproate used for?

Valproate is commonly used for epilepsy and manic depression.

It is also used in:

- People having difficult behaviours
- People feeling tense or angry

# Sodium Valproate

## What will Valproate do?

Valproate will help to control your fits

Valproate will help you feel calm and relaxed.

It could take some time for Valproate to have its full effect.

## What are the side effects of Valproate?

Side effects are the unwanted effects of any medicine on the body.

Not everyone taking a medicine will get side effects.

Many side effects will go away with time. But some side effects may last for longer.

Some side effects can be serious.

You should tell your doctor if you have any side effect.

# Sodium Valproate

## Side effects of Sodium Valproate are:

- feeling unsteady on feet
- feeling confused
- having shakes in hands
- feeling sick
- having bruises without any reason or bleed easily
- having a rash on skin
- your skin looks yellow.
- feeling sleepy or tired
